Paper type	Core Theory-III	Syllabus Version		2023-24	
0 01 4					

The main objectives of this course are to design the amplifiers, feedback amplifiers and power amplifiers, op-amp characteristics

Exp	Expected Course Outcomes:						
On the successful completion of the course, student will be able to:							
1 Explain the working of amplifier with its types.							
2	Outline the concept of feedback amplifiers with parameters involved.	K2					
3	Discuss the DC and AC characteristics of Operational amplifier	K4					
4	Develop electronic circuits using Op-amp.	К6					
5	Describe the working of Oscillators and its types.	K5					
K1	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						

Unit:1	POWER ELECTRONICS	12 hours					
Construction, working characteristics of UJT and SCR - Equivalent circuit of UJT - SCR as a							
switch and rectifier -	Applications of UJT and SCR - Characteristics of TRIAC.						

Unit:2 SPECIAL DIODES 12 hours

Schottky effect - Working characteristics of MIS, MIM diodes - Working and merits of CCD, LED and LCD - LDR - Photodiode - Solar cell - Semiconductor LASER diode and its application.

Unit:3 INTEGRATED CIRCUITS 12 hours

Integrated circuit - Monolithic Integrated Circuit technology - Fabrication of IC components - Resistors, Capacitors, Diodes, Transistors, FET and MOSFET - Thin and thick film technology - LSI - MSI - VLSI - IC package and symbols - Merits and demerits of ICs.

Unit:4 OPERATIONAL AMPLIFIERS 12 hours BJT Differential amplifier – ideal operational amplifier – Transfer characteristics – Various offset parameters – Differential gain – CMRR – Slew rate – Bandwidth – Internal circuit diagram of IC 741.

Unit:5 OP-AMP CIRCUITS 12 hours

Basic operational amplifier circuits under inverting and non-inverting modes - Adder - Subtractor - Integrator - Differentiator - Comparator - Sine, square and triangular waveform generators - Active filters - Sample and Hold circuits.

		4	0	0	3
Paper Type	ELECTIVE – III	Sylla Vers	abus sion	2023-24	

The main objectives of this course are to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs, applications in C

Ex	Expected Course Outcomes:					
On	On the successful completion of the course, student will be able to:					
1	Explain the fundamentals of C Programming.					
2	Develop programs using Decision making statements and functions.	К6				
3	Write C programs using Arrays and pointers.	К3				
4	Interpret the concept of Structures and Unions in C language	K5				
5	5 Use Data file concepts in C language. K1					
K 1	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create					

Unit:1	FUNDAMENTALS	12 hours				
Character set - K	Xeywords - Identifiers - Data types - Constants - Variables -	Operators and their				
hierarchy - Expre	ession - Statements - Input/Output functions.					
Unit:2	DECISION MAKING STATEMENTS	12 hours				
if-else, while, do	o-while, for, switch I break, continue, goto statements. Fun	ctions: Definitions -				
Arguments - Function prototype - Recursion - Library functions.						
Unit:3	ARRAYS	12 hours				
Array definition	Array definition - Processing arrays - Passing array to a function - Multidimensional arrays -					
Strings - Storage	classes.					
Unit:4	POINTERS	12 hours				
Pointer declarati	ion - Pointer arithmetic - Pointers and arrays - Pointer	operation - Passing				
pointers to a fund	ction - Passing function to a function.					
Unit:5	STRUCTURES AND UNIONS	12 hours				
Structure definit	Structure definition - Processing a structure - Structures and pointers - Passing structure to a					
function - Self-referential structures - Unions. Data files: Opening, Closing, Creating, Processing						
data files						
	Total Lecture hours	60 hours

					0	3		
Paper Type	ELECTIVE III	ELECTIVE III		Syllabus		24		
					2023	023-24		
Course Objectives:								
The main objectives of this course are to understand the basic concept of physics.								

Ex	Expected Course Outcomes:				
On	the successful completion of the course, student will be able to:				
1	Explain the concepts of Moment of Inertia and gravitation.	K2			
2	Discuss the idea of elasticity in physics.	К3			
3	Interpret the importance of viscosity in liquids.	K4			
4	Outline the concept of Thermal Conductivity and thermodynamics.	K1			
5	Describe the parameters sound energy and acoustics.				

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 12 hours

Moment of Inertia - Radius of gyration - Moment of inertia of a circular ring, circular disc, solid sphere - Kinetic energy of a rolling object - Acceleration of a body rolling down an inclined plane - Uniform circular motion - Centripetal force - Banking of curves. Gravitation: Newton's law - Determination of G by Boys method - Mass and mean density of earth - Variation of g with altitude, depth and latitude - Escape velocity - Weightlessness.

Unit:2 ELASTICITY 12 hours

Elastic constants - Young's modulus - Bending moment - Bending of beams - Young's modulus by non-uniform bending - Energy stored in a wire - Torsion in a wire - Torsional oscillations - Determination of rigidity modulus by static torsion.

Unit:3 VISCOSITY 12 hours

Streamlined and turbulent flow - Comparison of viscosities - Oswald's viscometer - Stoke's law - Terminal velocity - Viscosity of highly viscous liquid - Lubrication. Surface Tension: Molecular theory of surface tension - Formation of drops and bubbles - Excess of pressure inside a soap bubble - Surface tension of liquid by Jaegar's method - Variation of surface tension with temperature.

Unit:4 THERMAL CONDUCTIVITY 12 hours

Coefficient of thermal conductivity - Thermal conductivity of a bad conductor by Lee's disc method, Good conductor. Thermodynamics: Statement of first law of thermodynamics - Statement of second law of thermodynamics - Reversible and irreversible processes.

Unit:5

Intensity and Loudness - Decibel - Intensity levels - Measurement of AC frequency - Melde string - Frequency of vibrator. Acoustics of Buildings and Ultrasonic: Reverberation - Time of reverberation - Sabine's formula - Absorption coefficient - Production and uses of ultrasonic waves.

Total Lecture hours	60 hours

Paper Code	PCB DESIGN AND FABRICATION	L	L T I					
		2	0	0	2			
Paper Type	Skill Enhancement Course (SEC - V)		Syllabus Version		2023-24			
Course Objectives:								
To Understand the need for PCB Design and steps involved in PCB Design and Fabrication								
process.								
Familiarize Schematic and	Familiarize Schematic and layout design flow using Electronic Design Automation (EDA) Tools							

Ex	Expected Course Outcomes:					
On	On the successful completion of the course, student will be able to:					
1	1 Categorize different types of PCB					
2	Design a PCB schematic layout and artwork process.	К5				
3	Discuss the process of Laminates and Photo Printing	K1				
4	Explain the concept of Etching And Soldering	К3				
5	Formulate Design Rules and Automation procedure for PCB design	К4				
K 1	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create					

Unit:1	TYPES OF PCB 12 hours						
Single sided board -	double sided - Multilayer boards - Plated through holes	technology -					
Benefits of Surface	Mount Technology (SMT) - Limitation of SMT - S	Surface mount					
components: Resistors	s, Capacitor, Inductor, Diode and IC's.						
Unit:2	LAYOUT AND ARTWORK	12 hours					
Layout Planning -	General rules of Layout - Resistance, Capacitance and	Inductance -					
Conductor Spacing -	Supply and Ground Conductors - Component Placing ar	nd mounting -					
Layout check. Basic a	rtwork approaches –General artwork rules.						
Unit:3	LAMINATES AND PHOTO PRINTING	12 hours					
Manufacture of coppe	er clad laminates – Properties of laminates – Types of Lamir	nates – Manual					
cleaning process – B	asic printing process for double sided PCB's - Photo resi	sts – wet film					
resists – Dry film resi	sts.						
Unit:4	ETCHING AND SOLDERING	12 hours					
Introduction – Etchin	g machine - Etchant system. Soldering: Principles of Solde	r connection –					
Solder joints – Solde	r alloys - Soldering fluxes. Soldering Tools: Soldering, Des	soldering tools					
and Techniques.							
Unit:5	DESIGN RULES AND AUTOMATION	12 hours					
Reflection – Crosstalk	x – Ground and Supply line noise –Automated artwork draftin	g – CAD.					
	Total Lecture hours	60 hours

Paper Code	DIGITAL ELECTRONICS	L	T	P	C	
		5	0	0	5	
Paper Type	Core Theory -4	Syllabus Version 2023-				
Course Objectives:	·	•				
Number systems and	the interconversion between them. Boolean algebra	and th	e sim	plifica	ition	

Number systems and the interconversion between them, Boolean algebra and the simplification of logic circuits using Karnaugh map

Arithmetic circuits, multiplexing and demultiplexing operations and a few logic families

Various flip-flops, design of registers and counters, and the architecture and applications of Timer IC555

A/D and D/A converters and their accuracy and resolution.

Ex	Expected Course Outcomes:					
On	On the successful completion of the course, student will be able to:					
1	Recall various number systems and its application in digital circuits.	K1				
2	2 Apply Boolean laws and Karnaugh map to simplify the switching functions K2					
3	3 Design various combinational circuits using logic gates K3					
4	Design and analyze the various sequential digital circuits using flip-flops	К6				
5	Perform analog to digital conversion and digital to analog conversion for given inputs K5					
K 1	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create					

Unit:1	NUMBER SYSTEM AND CODES 12 hou						
Decimal, binary, octa	d, hex numbers, conversion from one to another - codes, BCD	, excess 3, gray					
codes conversion from	m one to another - Error correction / detection codes.						
Unit:2	BOOLEAN ALGEBRA AND THEOREMS	12 hours					
	Basic, Universal logic gates - Boolean Theorems - sum of products, products of sums expression, simplification by Karnaugh Map method, simplification based on basic Boolean theorems - don't care conditions.						
Unit:3	COMBINATIONAL DIGITAL CIRCUITS	12 hours					
Arithmetic building b	blocks, Basic Adders and Subtractors, BCD adders - Data prod	cessing circuits,					
multiplexers, demulti	plexers, encoders, decoders - TTL, CMOS digital logic famili	es.					
Unit:4	SEQUENTIAL DIGITAL CIRCUITS	12 hours					
Flip - Flops, RS, clo	cked SR, JK, D, T, master-slave types - shift registers, ring	counters-ripple					
counters - Design of	counters - modulus of counters - timer IC 555, applications.						
	-						
Unit:5	DAC AND ADC	12 hours					
Parameters, Accuracy	y, Resolution - DAC, variable resistor network, R-2R ladder	network types -					
ADC, counting, conti	nuous, successive approximation, dual-slope types.						
	Total Lecture hours	60 hours

Paper Code	A. PYTHON PROGRAMMING	L	T	P	C
		4	0	0	3
Paper Type	ELECTIVE -IV	Sylla Vers	abus sion	2023	3-24

The main objectives of this course are to:

- 1. To introduce the fundamentals of Python Programming.
- 2. To teach about the concept of Functions in Python.
- 3. To impart the knowledge of Lists, Tuples, Files and Directories.
- 4. To learn about dictionaries in python.

Ex	Expected Course Outcomes:					
On	the successful completion of the course, student will be able to:					
1	Remembering the concept of operators, data types, looping statements in Python programming.	К1				
2	Understanding the concepts of Input / Output operations in file.	K2				
3	Applying the concept of functions and exception handling	К3				
4	Analyzing the structures of list, tuples and maintaining dictionaries	К6				
5	Demonstrate significant experience with python program development environment	К5				
K1	- Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create	•				

Unit:1 12 hours

Basics of Python Programming: History of Python-Features of Python-Literal-Constants-Variables-

Identifiers—Keywords-Built-in Data Type – Output Statements –Input Statements-Comments – Indentation- Operators-Expressions-Type conversions. **Python Arrays:** Defining and Processing Arrays – Array methods.

Unit:2 12 hours

Control Statements: Selection/Conditional Branching statements: if, if-else, nested if and if-elseif-else statements. Iterative Statements: while loop, for loop, else suite in loop and nested loops. **Jump Statements:** break, continue and pass statements.

Unit:3 12 hours

Functions: Function Definition – Function Call – Variable Scope and its Lifetime-Return Statement. **Function Arguments:** Required Arguments, Keyword Arguments, Default Arguments and Variable Length Arguments- Recursion. **Python Strings:** String operations - Immutable Strings - Built-in String Methods and Functions - String Comparison. **Modules:** import statement- The Python module – dir() function – Modules and Namespace–Defining our own modules.

Unit:4 LIST, TUPLES & DICTIONARIES 12 hours

Lists: Creating a list-Access values in List - Updating values in Lists- Basic list operations-List Methods. **Tuples**: Creating, Accessing, Updating and Deleting Elements in a tuple–Difference between lists and tuples. **Dictionaries:** Creating, Accessing, Updating and Deleting Elements in a Dictionary – Dictionary Functions And Methods – Difference between Lists and Dictionaries.

Unit:5	FILE HANDLING	12 hours
Python File Handlin	g: Types of files in Python -Opening and Closing files-Read	ing and Writing
files: write() and write	e lines() methods- append()method-read()andreadlines()method	s-withkeyword-
Splittingwords –File n	nethods-File Positions-Renaming and deleting files.	·

		4	0	0	3				
Paper Type	ELECTIVE -IV	Syllabus Version		2023-24					
Course Objectives:									
Students will learn fundamentals	of Optics, Spectroscopy, Relativity and Par	rticle F	hysic	S					

Exp	Expected Course Outcomes:					
On t	On the successful completion of the course, student will be able to:					
1	Describe the impact of Optics in the constructional and designing environment	К4				
2	Comprehend the fundamental ideas of Spectroscopy and lasers	K1				
3	3 Enumerate the preambles of positive rays, Atom Model and Radioactivity					
4	Discuss the concepts of Nuclear and Particle Physics	КЗ				
5	5 Explain the principle of Relativity and its associated concepts					
K1 -	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create	•				

Unit:1 OPTICS 12 hours

Interference - Interference in wedge shaped films - Newton's rings - Measurement of wavelength and radius of curvature by Newton's rings - Diffraction - Fresnel and Fraunhofer diffraction - Elementary theory of formation of spectra by transmission grating (normal incidence) - Determination of wavelength - Polarization - Optical activity - Biot law - Determination of specific rotatory power - Half shade polarimeter - Uses of polarized light.

Unit:2 SPECTROSCOPY 12 hours

Types of spectra - Scattering of light - Tyndall and Rayleigh scattering - Raman Effect - Experimental study of Raman Effect - Theory and applications. Laser: Principle, action and Characteristics of laser - Ruby laser - He-Ne laser - Applications of laser.

Unit:3 POSITIVE RAYS 12 hours

Properties - Bainbridge mass spectrometer - Isotopes. Photo electricity: Photoelectric emission - Einstein's equation - Millikan's experiment. Atom Model: Vector atom model - Postulates - Quantum numbers - Pauli's principle. Radioactivity: Natural radioactivity - Artificial radioactivity - Radio isotopes - Uses of radio isotopes.

Unit:4 NUCLEAR AND PARTICLE PHYSICS 12 hours

General properties of nuclei - Liquid drop model - Shell model - Magic numbers - Elementary particles - Classification - Anti-particles and anti-matter - Strangeness - Isospin - Basic ideas of quarks.

Unit:5 RELATIVITY 12 hours

Frame of reference - Galilean transformation - Postulates of special theory of relativity - Lorentz transformation - Length contraction - Time dilation - Relativity of simultaneity - Variation of mass with velocity - mass energy equation.

		2	0	0	2	
Paper Type	Skill Enhancement Course (SEC - VII)	Syllabus Version 2023-24				
Course Objectives:						

To learn about Home appliances. Trouble shoot the faults in the electronic appliance

Exp	Expected Course Outcomes:							
On t	On the successful completion of the course, student will be able to:							
1	Explain the working of Microwave Ovens and its safety procedures.	К2						
2	Demonstrate the working of washing machines with different features.	К6						
3	Describe the operation of Air Conditioners and Refrigerators.	К4						
4	Discuss the importance and functionality of digital devices used in home and Office.	К2						
5	Illustrate the operation of digital access devices used in regular activity.	K1						
K1 -	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create							

Unit:1	MICROWAVE OVENS	12 hours							
Microwaves - Propert	ties and generation - Microwave oven block diagram - l	LCD timer with alarm							
- Controllers - Wiring	- Controllers - Wiring and Safety instructions - Care and Cleaning.								
Unit:2	WASHING MACHINES	12 hours							
Electronic controller	for washing machines - Washing machine hardware an	d software - Types of							
washing machines - F	Fuzzy logic washing machines - Features of washing ma	chines.							
Unit:3	AIR CONDITIONERS AND	12 hours							
Unit.5	REFRIGERATORS	12 Hours							
Air Conditioning - Co	omponents of air conditioning systems - All water air c	onditioning systems -							
All air conditioning s	ystems - Unitary and central air conditioning systems -	Split air conditioners.							
Unit:4 HOME / OFFICE DIGITAL DEVICES 12 hours									
Facsimile machine -	Xerographic copier - Calculators - Structure of a	calculator - Internal							
Organization of a calc	culators - Servicing electronic calculators - Digital cloc	ks - Block diagram of							
a digital clock.		_							
Unit:5	DIGITAL ACCESS DEVICES	12 hours							
Digital computer - In	ternet access - Online ticket reservation - Functions an	d networks - Barcode							
Scanner and decoder	- Electronic Fund Transfer - Automated Teller Machine	es (ATMs).

Paper Code		MICROPROCESSOR AND ITS APPLICATIONS	L	Т	P	C	
			5	0	0	4	
Paper Type		Core Theory-V	Syllabus		2023-24		
				sion			
Course Objectives:	Course Objectives:						
Architecture of 8085	micropi	rocessor instruction sets, addressing mod	les and	l prog	gramr	ning	
exercises	exercises						
Stacks and stack operate	Stacks and stack operations						
Interfacing memory devices							
Interfacing 8085 microprocessor with input/output devices							
Interfacing programmable peripheral devices.							

Expected Course Outcomes:					
On t	he successful completion of the course, student will be able to:				
1 Illustrate the architecture, instruction set, addressing modes and programming of 8085 microprocessor.					
2	Demonstrate the concepts of advanced programming techniques in 8085 microprocessor.	КЗ			
3	Elaborate the different types of memories in 8085 microprocessor.				
4	Design and develop the interfacing circuits for various applications using 8085 Microprocessor.				
5	Outline the procedure of interfacing various circuits with 8085 Microprocessor.	K1			
K1 -	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create				

Unit:1	nit:1 8085 MICROPROCESSOR ARCHITECTURE AND ISTRUCTION SET						
Architecture of 8085 microprocessor - Registers - Flags - ALU - Address and data buses -							
Demultiplexing the a	ddress / data bus - Control and status signals - Instruction	set of 8085 -					
Addressing modes -	Assembly language programming - Programs for addition	n, subtraction,					
multiplication and div	rision of binary and BCD numbers (8-bit only)						
Unit:2 STACK AND PROGRAMMIMG TECHNIQUES 12							
Stack and stack relate	ed instructions - Subroutines - Advanced programming tech	niques - Code					
conversions - Block transfer of data - Sorting of data - Time delays using single register and							
register pair - Delay calculations.							
Unit.2	SEMICONDUCTOR MEMORIES AND	12 hours					

Semiconductor memories - Classification - Instruction cycle, Machine cycle and T-state - Timing diagrams for opcode fetch, memory read, memory write, I/O read and I/O write machine cycles - Interfacing memory chips - Interfacing an input port - Interfacing an output port - I/O mapped I/O and memory mapped I/O techniques.

INTERFACING I/O DEVICE

Unit:3

Unit:4 INTERRUPTS AND PROGRAMMABLE PERIPHERAL INTERFACE 12 hours

Interrupts - Hardware and software interrupts - Interrupt priorities - SIM and RIM instructions - Polled I/O and interrupt controlled I/O data transfer - Interfacing programmable devices - Programmable Peripheral Interface 8255 - Internal architecture - Control register and control word - Programming 8255 - Interfacing hex-keyboard and seven segment display.

T I:4.5	INTERFACING PERIPHERALS AND	12 havens
Unit:5	APPLICATIONS	12 hours

Interfacing D/A converter and waveform generation - Interfacing A/D converters - Keyboard / Display Controller 8279 - Internal architecture and working - Programmable Interval Timer 8253/54 - Internal architecture and different modes of operation - Stepper motor interface - Temperature controller - Traffic lights controller

Course Objectives:										
Basics of digital cellu	lar syst	em, cordless telephony and cell structure								
GSM wireless protocol and markup language fundamentals										
Basics of WLL and B	Basics of WLL and Bluetooth technology									

Exp	Expected Course Outcomes:						
On t	he successful completion of the course, student will be able to:						
1	1 Explain the principles of Mobile communication K						
2	2 Discuss the cell structure and the process involved in cellular systems.						
3	3 Elaborate GSM technology and its associated operations.						
4	4 Explain the layers of wireless protocol and its related functions.						
5	5 Outline the different methods of wireless communication systems.						
K1 -	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						

Unit:1	12 hours								
Advanced mobile ph	one service - Global system for mobile communication - l	Digital cellular							
system - Cordless tele	phony - Third generation wireless systems.								
Unit:2 DIGITAL CELLULAR SYSTEM 12 hours									
7 Cell structure - I	Hand off - roaming management - Hand off detection - Chan	nel assignment							
techniques - Interfer	ence - ACI, CCI - Intersystem hand off and authenticati	on - Network							
signaling - Cellular di	gital packet data.								
Unit:3	NETWORK SIGNALLING	12 hours							
GSM - Network sign	aling, mobility management, short message service - Internat	tional roaming,							
administration and op	peration.								
Unit:4	WIRELESS TECHNOLOGY	12 hours							
Wireless application	protocol - Architecture - Datagram - wireless markup lang	guage, WML -							
Script wireless teleph	ony applications.								
Unit:5	Unit:5 MOBILE GENERATION 12 hours								
Generation of mobile services - Wireless local loop - Bluetooth technology – wifi technology.									
	Total Lecture hours 60 hours

The objectives of this course are:

- ❖ To provide knowledge on Fabrication Process of NMOS,PMOS,CMOS AND BICMOS, Super integration concepts.
- To develop the skill to analyze the electrical properties of MOS transistor, designs tick diagrams and layout diagrams for MOS transistors, contacts and wires.
- ❖ To investigate the effect of floor planning, placement, routing and power delay estimation in physical design of digital circuits and memory design.
- ❖ To apply the concept of Combinational and Sequential Circuit Testing.

Expected Course Outcomes:

on sweetstar tempreted of the temps (statement will be well to			
1	Gain the knowledge on fabrication principles.	K1	
2	Able to analyze the electrical properties of MOS transistors.	K4	
3	Apply the appropriate layout design rule to create a VLSI layout for a design	K6	
4	Understand the physical design steps and gain the knowledge on types of	K2	
	VLSI design styles.		
5	Gain the knowledge ,analyze and apply test principles to evaluate the	K5	
	VLSI designs.		

K1-Remember; K2-Understand; K3-Apply; K4-Analyze; K5-Evaluate; K6-Create

Unit:1	VLSI TECHNOLOGY	15 Hours

Fabrication sequence–process flow–Testing–Super integration concepts –Integrated Passive components – MOS Resistors and capacitors – Crossovers – NMOS – PMOS – CMOS – BICMOS fabrication processes – comparison.

Unit:2	ELECTRICALPROPERTIESOF MOS	15 Hours
Umt.2	DEVICES	

 $Drain \ to \ source \ current(I_{ds}) \ versus \ Drain \ to \ source \ voltage(V_{ds}) \ relationships - MOS$

Transistor threshold voltage(V_t)–MOS transistor trans-conductance g_{ds} – figure of merit (ω_0) – pass transistor- pull – up to pull – down ratio.

Unit:3	DESIGN PROCESSES	15 Hours
Ome		15 110415

VLSI design flow-stick diagram design rules with examples-Design rules for Layout diagrams of digital circuits—sheet resistance R_s —standard unit of capacitance—Inverter delays—Propagation delays- scaling of MOS circuits — limitations of scaling.

Unit:4 VLSIPHYSICALDESIGNANDSTYLES 15 Hours

PHYSICALDESIGN:

Floor Planning-Placement-Routing-Power Delay Estimation-Clock Routing-Power Routing.

VLSI DESIGNSTYLES:

Full Custom – Semicustom – Standard Cells–Gate Arrays–FPGAs–CPLDs.

Unit:5	TESTINGOF VLSICIRCUITS	15 Hours		
TestPrinciples-BIST-TestBench-CombinationalCircuitTesting,SequentialCircuit Testing, Test				
Bench Techniques.				
	TotalLectureHours	75 Hours

		4	0	0	3				
Paper Type	ELECTIVE – VI	Sylla	Syllabus		2 24				
		Vers	Version		2023-24				
Course Objectives:									
The students will be able to handle most of the electronic instrumentation in the medical field									

Exp	ected Course Outcomes:	
On t	he successful completion of the course, student will be able to:	
1	Illustrate different bioamplifiers used for the biosignal amplification.	К2
2	Outline the procedure used for the measurement of electrical parameters of the human	КЗ
	body.	IN.S
3	Discuss the process used for the measurement of non-electrical parameters of the	K5
	human body.	11.5
4	Analyze the effect of different diagnostic and therapeutic application of	К4
-	electromagnetic radiation.	11.4
5	Demonstrate the therapeutic applications high frequency radiations.	K1
K1 -	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create	•

Unit:1	BIO-AMPLIFIERS 1					
Bio potentials - Bio-e	lectricity - Necessity for special types of amplifiers for biolog	ical signal				
amplifications - Diffe	rent types of Bio-OP - Amps.					
Unit:2	BIO-POTENTIAL RECORDING	12 hours				
ECG - EEG - EMG -	ERG - Specific types of electrodes used - Different lead syste	ms - their				
waveforms.						
Unit:3	MEASUREMENT OF BIOLOGICAL	12 hours				
Umt:3	PARAMETERS	12 Hours				
Measurement of respi	ration rate - Measurement of heart beat rate - Measurement of	temperature -				
Measurement of blood	d pressure - Patient monitoring set up - Blood flow meters EM	I and				
plesthsmographic tech	nnique.					
Unit:4	HIGH ENERGY RADIATION APPLICATIONS	12 hours				
Applications of X-ray	and gamma ray for diagnostics and therapeutic applications -	Application				
of Lasers in biologica	l medium.					
Unit:5	HIGH FREQUENCY APPLICATIONS	12 hours				
Diathermy effect - Sh	ort, wave diathermy - Ultrasonic diathermy - Microwave diath	nermy.				
	Total Lecture hours	60 hours

Course Objectives:						
The working of power semiconductor devices such as power diode, power transistor, TRIAC, MOSFET, IGBT.						
The different types of rectif	iers for single phase and three phase controls	S.				
The working of inverters, choppers and cycloconverters and their application in industry						

Exp	ected Course Outcomes:		
On	the successful completion of the course, student will be able to:		
1	Describe the fundamentals and key characteristics of power semiconductors Devices	К3	
2	Analyze the electrical parameters of different phase controlled converters with various loads	К2	
3	Explain the Principle of various inverter topologies	К5	
4	Discuss the working of Choppers and Cycloconverters	K1	
5	Describe the operation various Control circuits and application power semiconductors Devices K2		
K1	- Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create		

Unit:1	POWER SEMICONDUCTOR DEVICES 12 hours				
Power diode, Power	transistor, TRIAC, MOSFET and IGBT - turn on methods,	driver circuits -			
SCR characteristics	SCR characteristics - Two transistor analogy - Methods of turning ON and turning OFF - Series				
and parallel connecti	and parallel connections of SCRs.				
Unit:2	PHASE CONTROLLED CONVERTERS	12 hours			
Single phase control	led rectifier - Half wave controlled rectifier with 1.Resistive	load 2.RL load			
3. RL load and batte	ery - Full wave controlled rectifier with above types of load	s - Three phase			
controlled rectifier -	HVDC transmission.				
Unit:3	INVERTERS	12 hours			
Single phase and thr	ee phase inverters - Series and parallel inverters - Bridge inv	erters - Current			
source inverter.					
Unit:4	CHOPPERS AND CYCLOCONVERTERS	12 hours			
Various types of DC	choppers - Step up chopper - AD chopper - Single phase AC	chopper - Step			
	ycloconverters - Three phase to single phase and three phase				
cycloconverters.					
Unit:5 CONTROL CIRCUITS AND APPLICATION 12 hours					
Generation of contro	Generation of control pluses - Microprocessor based implementation - Static circuit breakers for				
DC and AC circuits - Regulated power supply - UPS - SMPS.

Paper Type			6	0	0	4
		Core Theory - VIII	Syllabu Versior		2023-24	
Course Objectives:						
The architecture of 80	The architecture of 8051 Micro-controller					
The interrupts, counter, timer and serial data transmission						
The instruction set and simple programs						
Tnterfacing peripherals						

Exp	ected Course Outcomes:	
On t	he successful completion of the course, students will be able to:	
1	Explain the basic architecture of 8051 with its associated components.	К6
2	Demonstrate the functions of Counter, Timer, Serial data input / Output and Interrupts of 8051	К2
3	Illustrate the Instruction set, addressing modes and programming of 8051 microcontrollers.	K1
4	Discuss the data move operations, jump and call instructions programs of 8051.	К4
5	Describe the functions and interfacing of different peripheral ICs with 8051	К3
K1 -	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create	

Unit:1	CONTROLLER	12 hours		
Microprocessor and Micro-controller - 8051 Micro-controller hardware: 8051 oscillator and cloc				
- Program counter an	d data pointer - A and B CPU register - Flags and PSW -	Internal memory -		
Internal RAM - Stack	and stack pointer - Special function registers - Internal Ro	OM. Input / output		

pin, ports and circuits - External memory.

MICROPROCESSOR AND MICRO-

Unit:2 **COUNTER AND TIMER** 12 hours

Counter / Timer interrupts - Timing - Timer modes of operation - Counting. Serial data input / Output: Serial data interrupt - Data transmission - Data reception - serial data transmission modes. Interrupts: Timer flag interrupt - Serial port interrupt - External interrupt - reset - Interrupt control - Interrupt priority - Interrupt destination - Software generated interrupts.

Unit:3 MOVING DATA AND INSTRUCTIONS 12 hours

Introduction - Addressing modes - Byte level logic operations - Bit level logic operations - Rotate and swap operations - Simple program. Arithmetic Operations: Introduction - Flags -Incrementing and Decrementing - Addition - Subtraction - Multiplication and Division - Simple Program.

Unit:4 **JUMP AND CALL INSTRUCTIONS** 12 hours

Introduction - External data move - code memory read only data move - PUSH and POP -Opcodes - Data exchange - Simple Programs. Jump and Call instructions: Introduction - Jump and call program range - Jumps - Calls and subroutine - Interrupt and returns - more detail on interrupts - Simple programs.

Unit:5	MICROCONTROLLER INTERFACING	12 hours	
Keyboard interfacing - Display interface - 7 segment and LCD display - D/A conversion - A/D conversion - Stepper motor Interface.			
	Total Lecture hours	60 hours

Paper Code	A. TELEVISION AND VIDEO ENGINEERING	L	T	P	С
		5	0	0	3
Paper Type	ELECTIVE - VII	Syllabus Version		2023-24	

Course Objectives:

Principles of TV system, and overall view of complete TV system such as picture tube, transmitter, receiver, etc.,

World TV transmission standards.

Working of black and white and color TV receiver electronics.

Working of video cassette recorder and player.

Exp	Expected Course Outcomes:					
On t	On the successful completion of the course, student will be able to:					
1	Outline the characteristic of video capturing devices. K2					
2	Describe the working of Television and its related accessories.	K1				
3	Explain the operation of Television architecture and its associated components.	К4				
4	Discuss the functionality of advanced television concepts.	К6				
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						

Unit:1	it:1 TELEVISOIN – FUNDAMENTALS,CAMERA TUBES AND PICTURE TUBE			
Characteristics of Hu	man eye - Theory of scanning - Camera tubes - Vidicon - S	Silicon diode array		
vidicon - Picture tube	s - Composite video signal.			
Unit:2	TRANSMITTING AND RECEIVING ANTENNAS	12 hours		
Television transmitte	ers - Television signal propagation - Television transm	ission antennas -		
Television receiver an	ntennas - Colour Television Antennas - Television receiver	•		
Unit:3	COLOUR TELEVISION-TYPES AND CHARACTERISTICS	12 hours		
Colour Television sy	stems - Colour characteristics - Colour Television Camera	a - Colour picture		
tube - Colour signal g	generation - PAL, NTSC, SECAM - Comparison.	-		
	-			
Unit:4	COLOUR TV RECEIVER	12 hours		
Colour Television re	ceivers - PAL D Colour receiver, AGC, Sync - Separate	ors and deflection		
	channel, Colour signal processing, separation of U a			
	generation and control.			
	-			
Unit:5	SPECIAL TYPES OF TELEVISION	12 hours		
Special Topics in Te	levision - Digital tuning techniques - Remote control - C	Cable Television -		
	tape recorders - Video disc systems - Digital TV - Funda	mentals of Digital		
TV.				

Total Lecture hours

60 hours

		5	0	0	3				
Paper Type	ELECTIVE - VII	Syllabus Version		2023-24					
Course Objectives:									
The fundamentals of Boolean algebra and simplification of Boolean functions.									
The combinational logic circuits and their design using HDL.									
The sequential logic circuits and their design using HDL.									

Exp	Expected Course Outcomes:					
On t	On the successful completion of the course, student will be able to:					
1	Simplify of Boolean functions using Karnaugh map and tabulation methods.	К2				
2	Design various combinational circuits using logic gates	K5				
3	Design MSI Devices and verify its functionality.	K1				
4	Design and analyze the various synchronous sequential circuits using flip-flops	К3				
5	Design and implement the asynchronous sequential circuits	К6				
K1 -	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create					

BOOLEAN ALGEBRA AND LOGIC GATES	12 hours				
Review of binary number systems - Binary arithmetic - Binary codes - Boolean Algebra and					
theorems - Boolean functions - Simplifications of Boolean functions using Karnaugh map and					
tabulation methods - Logic gates.					
COMBINATIONAL LOGIC	12 hours				
ts - Analysis and design procedures - Circuits for arithmetic	operations -				
ntroduction to Hardware Description Language (HDL).	_				
DESIGN WITH MSI DEVICES	12 hours				
ers - Multiplexers and Demultiplexers - Memory and program	nming logic -				
nal circuits.					
SYNCHRONOUS SEQUENTIAL LOGIC	12 hours				
Sequential circuits - Flip-flops - Analysis and design procedures - State reduction and state					
assignments - Shift registers - Counters - HDL for sequential logic circuits, shift registers and					
ASYNCHRONOUS SEQUENTIAL LOGIC	12 hours				
of asynchronous sequential circuits - Reduction of state and	flow tables -				
ment - Hazards					
Total Lecture hours	60 hours				
	COMBINATIONAL LOGIC ts - Analysis and design procedures - Circuits for arithmetic attroduction to Hardware Description Language (HDL). DESIGN WITH MSI DEVICES ers - Multiplexers and Demultiplexers - Memory and programmal circuits. SYNCHRONOUS SEQUENTIAL LOGIC Flip-flops - Analysis and design procedures - State reduct registers - Counters - HDL for sequential logic circuits, shift ASYNCHRONOUS SEQUENTIAL LOGIC of asynchronous sequential circuits - Reduction of state and ment - Hazards

Paner Tyne ELECTIVE - VII			_	_
	Syllabus		2023-24	
	Ve	rsion	202	J-2 4

Course Objectives:

To introduce the concepts of Robotic system, its components and instrumentation and control related to robotics. Vision equipment, Image processing, Concept of low level and high level vision.

Exp	Expected Course Outcomes:		
On t	On the successful completion of the course, student will be able to:		
1	Explain the robot technology as their fundamental principles, laws and illustrate the various drive systems with control strategy.	К5	
2	2 Discuss the concepts of sensors and vision systems used to control the robots. K1		
3	Outline kinematics, programming language and & automation in robot K3		
4	4 Enumerate the usage of Programmable Logic Controllers in robotics K4		
5	5 Describe the process of computer numerical control in robots. K6		
K1 -	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create		

Unit:1	CLASSIFICATION OF ROBOTIC SYSTEMS,	12 hours
Umi:1	DRIVES AND CONTROL	12 hours

Basic structure of a robot - Classification of robots: Cartesian, Cylindrical, Spherical, Articulated, SCARA. Accuracy, resolution and repeatability of robots. Robot application in manufacturing: Material transfers - Machine loading and unloading - Processing operations - Assembly and inspection.

SYSTEMS: Hydraulic and Pneumatic systems: cylinders, control valves, hydro motor. Types of mechanical power drive, rotary to linear motion conversion mechanisms. Robot end effectors. Servomotors – operation, stepper motors - control loops using current and voltage amplifier. Robot controllers - configuration of robot controller.

Unit:2 SENSORS AND VISION SYSTEMS 12 hours

Types of sensors, tactile sensors, proximity sensors and speed sensors – Encoder, resolvers. Vision systems: Image processing and analysis, Segmentation, Feature extraction, Object Recognition.

Unit:3 ROBOT PROGRAMMING & AUTOMATION 12 hours

Lead through programming - Textual programming, programming examples - Social and Economical Aspects of Robots - Typical layouts of robots in Industries. AUTOMATION: Advantages of automation, building blocks of automation. Automatic feeding lines, material-handling devices, ASRS, transfer lines, automatic inspection, intelligent automation.

Unit:4	PROGRAMMABLE LOGIC CONTROLLERS (12 hours
Omt.4	PLC)	12 Hours

Basics of PLC, Architecture of PLC, Advantages, Types of PLC, Types of Programming - Simple process control program's using Relay Ladder Logic. Introduction to PLC networking. Introduction to HMI, DCS and SCADA systems.

Unit:5 COMPUTER NUMERICAL CONTROL (CNC) 12 hours				
Block diagram of a	CNC control system, Advantages, Power supply, CPU.	. CNC and PLC		
interfacing, Control loops. Feedback devices in CNC machine, analog and digital CNC systems.				
Introduction to FMS.				
	Total Lecture hours	60 hours

Paper Code	A. COMPUTER NETWORKS	L	T	P	С
		5	0	0	3
Paper Type	ELECTIVE - VIII	Syllab Version	2023-24		
		, CI DI			

Course Objectives:

provides a general introduction to computer networking that would be useful to all personnel who deal with distributed systems

encompassing both technical and managerial aspects.

to help students better understand the challenges and opportunities faced by modern business,

topics include LAN and WAN implementations, the Internet and internet applications.

Expected Course Outcomes:						
On the	ne successful completion of the course, student will be able to:					
1	Illustrate various Network structures and explain ISO OSI layers	К3				
2	Describe the role of communication and physical layer protocols in computer networks	К1				
3	Describe the concepts of data link layer services and protocols with various connecting devices	К5				
4	Analyze the operations of the network layer protocols and its applications.	К6				
5	Explain the Presentation layer and application layer protocols and various other networks.	К4				
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						

Unit:1 INTRODUCTION TO COMPUTER NETWORK	12 hours									
Network structure Point to Point, Broadcast, Multicast - Horizontal and vertical distribution -										
Star, Mesh, tree, bus structures - OSI 7 layer model - Architecture - Functions of lay	ers - Packet									
switches, circuit switching and message switching.										
Unit:2 THE PHYSICAL LAYER	12 hours									
Physical layer - Transmission media - Channel allocation methods - ALOHA, S-ALOHA,										
FINITE ALOHA - LAN Protocols IEEE802.3, 802.4, 802.5, 802.6 and 802.11.										
Unit:3 THE DATA LINK LAYER	12 hours									
Data link layer - Framing - Error detection - Error correction - CRC - Stop and wait -	Go band N -									
Sliding window Protocol - Selective repeat.										
Unit:4 THE NETWORK LAYER	12 hours									
Network layer - Routing algorithms and congestion control algorithms - Repeate	ers, Bridges,									
Routers and Gateways, Internetworking - Introduction to transport layer and session la	ayer.									
	-									
Unit:5 THE APPLICATION LAYER	12 hours									
Presentation layer - coding, compression and cryptography - Introduction to Applica	ation layer -									
High performance networks - ATM, Fast Ethernet, FDDI, DQDB, SONET and SDH.	-
